

Dr. Niraj Kumar Singh
Assistant Professor (Statistics)
Amity University, Noida

I have done Ph. D. in Statistics (with specialisation in Demography) from Department of Statistics, Banaras Hindu University, Varanasi. After submitting my thesis, I have joined a project in IIPS as research officer. I have worked there six months and then joined EMPI Business School as Assistant Professor. Presently I am working as an Assistant Professor of Statistics in Amity University, Noida.

My research interests span the areas of fertility, migration, and family dynamics. I am particularly interested in examining the social, structural, and economic processes that shape internal migration flows; effects of migration of fertility, marriage and urbanisation. I am also dedicated to modify/propose statistical techniques that best align with specific research questions. Presently four students are pursuing research under my supervision. I have published 19 research papers and 3 book chapters. I am actively involved in teaching, research and consultancy.

I have joined IASP as an annual member in 2008 and become life member in 2018. I have participated in all the annual conference of IASP since 2007. I have consistently worked towards promoting the activities of IASP and always encourage students/ juniors to participate in conferences/workshops.

If elected, I will work to strengthen the population research centres across the country. To emphasize the inevitability of population research centres in all governmental and non-governmental projects/programs/schemes etc. With the help of IASP, I will try my best for appointment of demographic scientist at the district level. I would like to work and expand the opportunities for early career demographers, population scientist and researchers.
